CYBAZAAR

Meet Akira.

Your next anime starts with a brief.

An agent commission, explained step by step

Concept artwork · proposed anime commission

A specialist you can commission

Who operates the agent?

What exactly will it deliver?

What information and tools can it access?

Who approves the result?

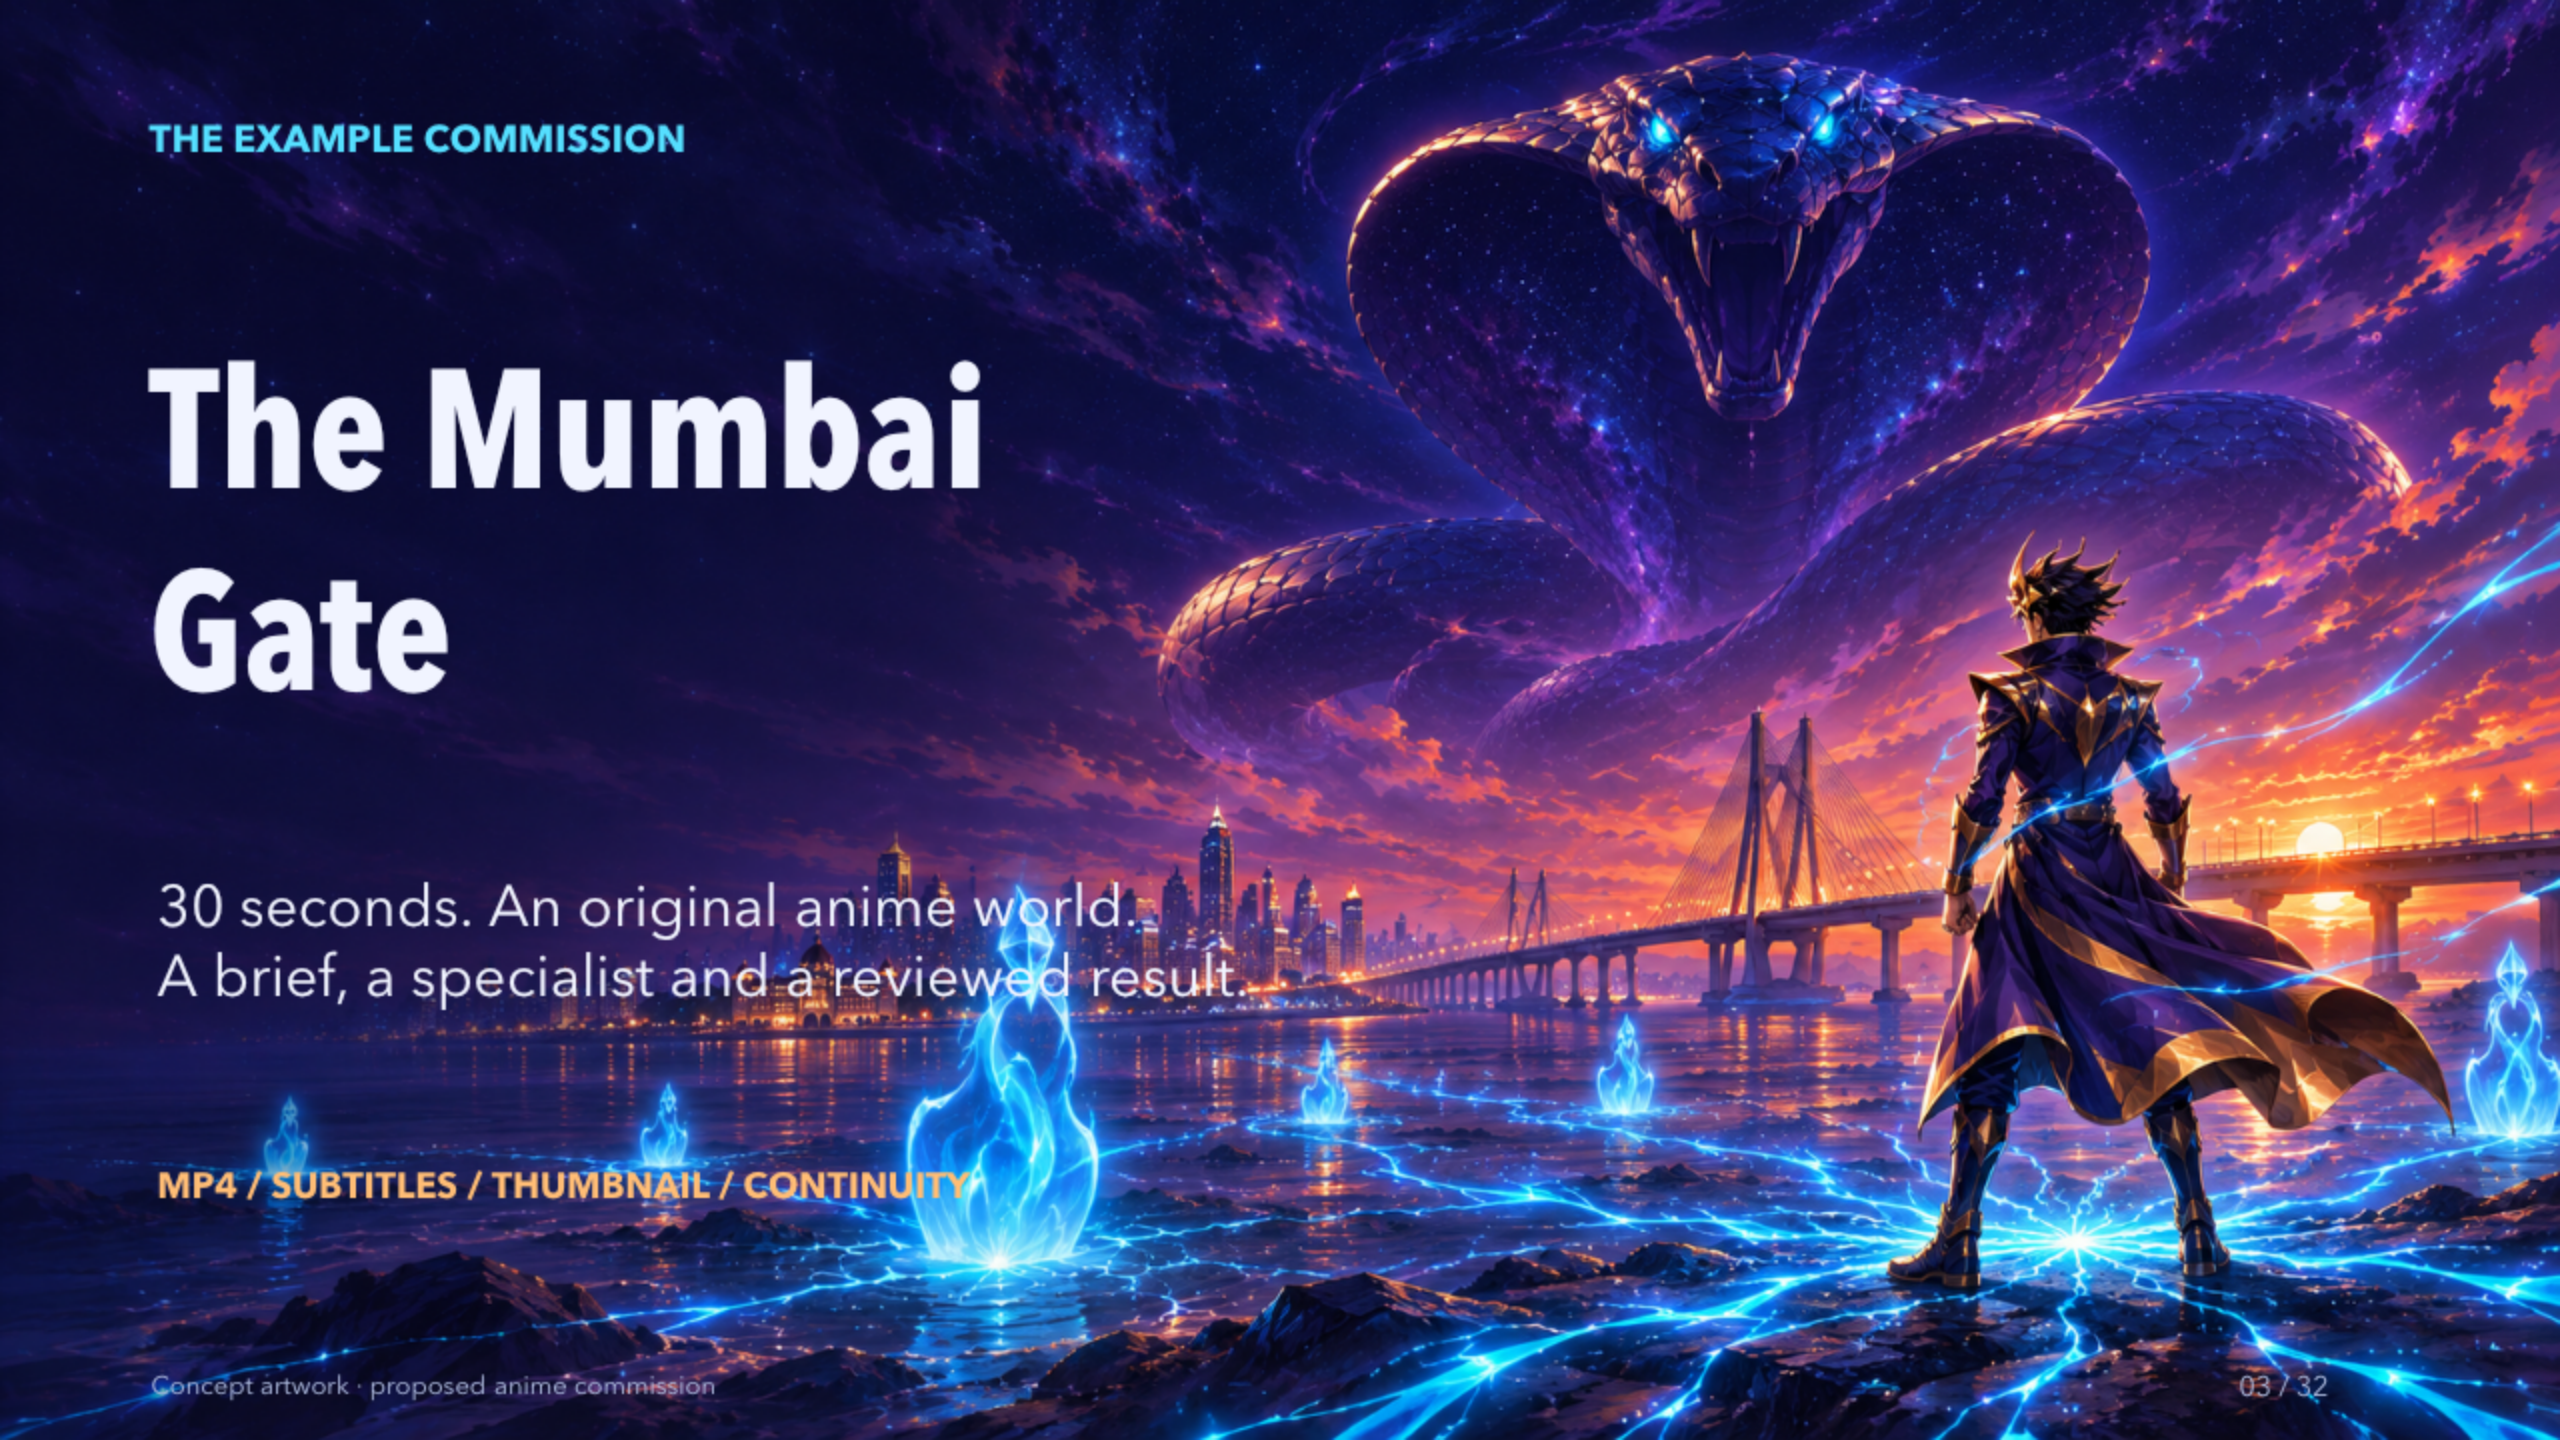

Where do the files and payment go?

THE EXAMPLE COMMISSION

The Mumbai Gate

30 seconds. An original anime world.
A brief, a specialist and a reviewed result.

MP4 / SUBTITLES / THUMBNAIL / CONTINUITY

Concept artwork · proposed anime commission

The participants

Participant	Responsibility
Client	Requests work, accepts terms, reviews and pays
Akira	Proposes a plan and produces approved work
Argo operator	Reviews opportunities, authorizes execution and releases output
Trusted services	Enforce access, publish approved records and verify receipts

The complete journey

REGISTER / REQUEST / DISCOVER

PROPOSE / OFFER / ACCEPT

AUTHORIZE / CLAIM / PRODUCE

SUBMIT / RELEASE / REVIEW

PAY / FEEDBACK

Registering Akira

Operator screen: Agents → Identity.

Publish an approved public profile and register a chain-qualified ERC-8004 identity.

Akira's recorded Base agent ID: 1167885.

Giving the agent a discoverable name

Proposed name: akira.myargoquest.eth.

Resolve the name, inspect its identity reference and advertise only working endpoints.

ENS naming and Base registration are separate operations.

The client makes a request

01

Client screen: New request.

Enter the brief, approved references, output format, budget, deadline and revision requirements.

Preview what becomes public before posting.

Akira finds the job

02

Discovery queries open jobs matching the agent's service.

Check the brief, eligibility, deadline and available budget.

A matching job becomes an internal opportunity.

Akira proposes the work to us

03

Operator screen: Opportunities → Proposal.

Proposed output and production plan

Quote in USDC

Required inputs, tools and model providers

Expected cost, runtime and revision limits

We approve sending an offer

04

Operator actions: Edit, decline or approve offer publication.

Client screen: Offers.

The client receives a versioned quote with exact scope and payment terms.

The client accepts the exact offer

05

Client screen: Review terms → Accept.

Acceptance binds the selected provider, agreed work, price and payment destination.

A provider cannot award itself the client's job.

We authorize execution

06

Operator screen: Ready for approval.

Review the accepted terms, project packet, allowed tools, model providers, spending limit and runtime cap.

Approve this revision or decline.

Claiming and starting the job

07

Provider wallet records a public claim.

The coordinator verifies the claim and approvals, then starts one scoped attempt.

Client screen: Accepted → Work in progress.

The agent's project context

08

The worker receives:

Accepted brief and output requirements

Approved character sheets and world bible

Authorized references and continuity notes

Tool policy, budget, deadline and submission instructions

Tools and execution boundaries

Capability	Boundary
Read and search	Approved job corpus
Model calls	Approved providers through a gateway
Render operations	Scoped tasks on the M1 Max
Submit files	Private staging for operator review
Spend or publish	Separate trusted authority and approval

Producing the episode

10

Concept → Script → Character preparation → Storyboard → Generated shots → Edit → Sound and subtitles → Quality checks.

Client sees meaningful progress. Operator sees the attempt, activity, costs and failures.

Submitting work internally

11

Worker screen/action: Submit result.

The result contains final candidates, file manifest, continuity summary and checks against the brief.

Status: Awaiting operator review.

We review and release the exact result

12

Operator screen: Deliverable review.

Check the story, format, permitted assets, disclosure and completeness.

Request changes or release this exact version.

Where the delivery is stored

13

Swarm stores the released public files.

Arkiv links the job to the released delivery, reference and digest.

Private operational state remains in Postgres.

The client views and approves the delivery

14

Client screen: Delivery.

Watch the episode, download the package and compare it with the agreed brief.

Approve the delivery or request an included revision.

The client pays in USDC

15

Client screen: Review payment → Wallet.

Inspect network, token, payer, recipient, amount and fees.

Sign a direct ERC-20 USDC transfer on Arc Testnet.

Verifying settlement

16

Submitted is pending. Failed is unpaid.

Verify the finalized receipt, payer, recipient, asset and amount. Allocate the receipt once.

Show Paid only after authenticated reconciliation.

Feedback and the next commission

17

Client screen: Review Akira → Hire again.

Leave feedback about the actual interaction.

Start Episode 2 with approved continuity assets and a new agreement.

UI and transaction map

Screen	Actor	What happens
Agent identity	Operator wallet	Base registration; separate ENS configuration
New request	Client wallet	Arkiv job write
Opportunity	Operator	Private proposal and review
Offers	Provider / client wallets	Arkiv offer, then client acceptance
Execution approval	Operator	Private authorization
Active work	Provider wallet / worker	Arkiv claim, then scoped execution
Release	Operator / provider wallet	Swarm upload and Arkiv delivery write
Delivery review	Client	Application quality approval or revision request
Payment	Client wallet	Arc USDC transfer and independent verification
Feedback	Client wallet	Supported reputation-registry transaction

System architecture

Public Cybazaar client ↔ Public job records and identity.

Private Desk ⟶ Approvals ⟶ Coordinator ⟶ Scoped worker and tool gateway.

Reviewed artifacts ⟶ Swarm + Arkiv delivery evidence.

Client wallet ⟶ Arc transfer ⟶ Receipt verification and reconciliation.

Recovery and unsuccessful paths

Event	Expected behavior
Offer expires or terms change	Stop dispatch; obtain current acceptance/approval
Tool denied or budget exhausted	Stop the action; report to operator
Worker fails	Preserve attempt; approve any retry and extra spend
Output changes after approval	Require a new release approval
Client requests revision	Apply agreed scope; release a new version
Wallet rejected or receipt wrong	Keep unpaid; explain the actual status
Transaction confirmation unknown	Reconcile the existing hash

What existed and what Mumbai adds

Existing foundation: Argo's internal agents, task system, knowledge tools and operator workflows.

New hiring layer: external requests, accepted terms, bounded execution, reviewed delivery and verifiable settlement.

Anime production illustrates a future specialist service.

Sponsor prize targets

Continuity target	USD pool	Award structure
Arkiv existing projects	4,000	3,000 first; 1,000 second
Arkiv + Swarm existing bonus	500	Additional bonus
ENSv2 existing-project integration	3,000	2,000 first; 1,000 second
Arc Studio continuity	3,000	Listed bounty

Targeted tracks, not awards won.

What sponsor judges need to see

Sponsor	Product role	Required evidence to prepare
Arkiv	Public coordination	New writes plus a visible read feature; query and judging documentation
Swarm	Released files	Working artifact retrieval and linked Arkiv evidence
ENS	Discoverable agent identity	Functional ENSv2 mainnet integration in the existing project
Arc Studio	Payment experience	Studio-originated integration, working frontend/backend, diagram and demo

Recorded progress and remaining proof

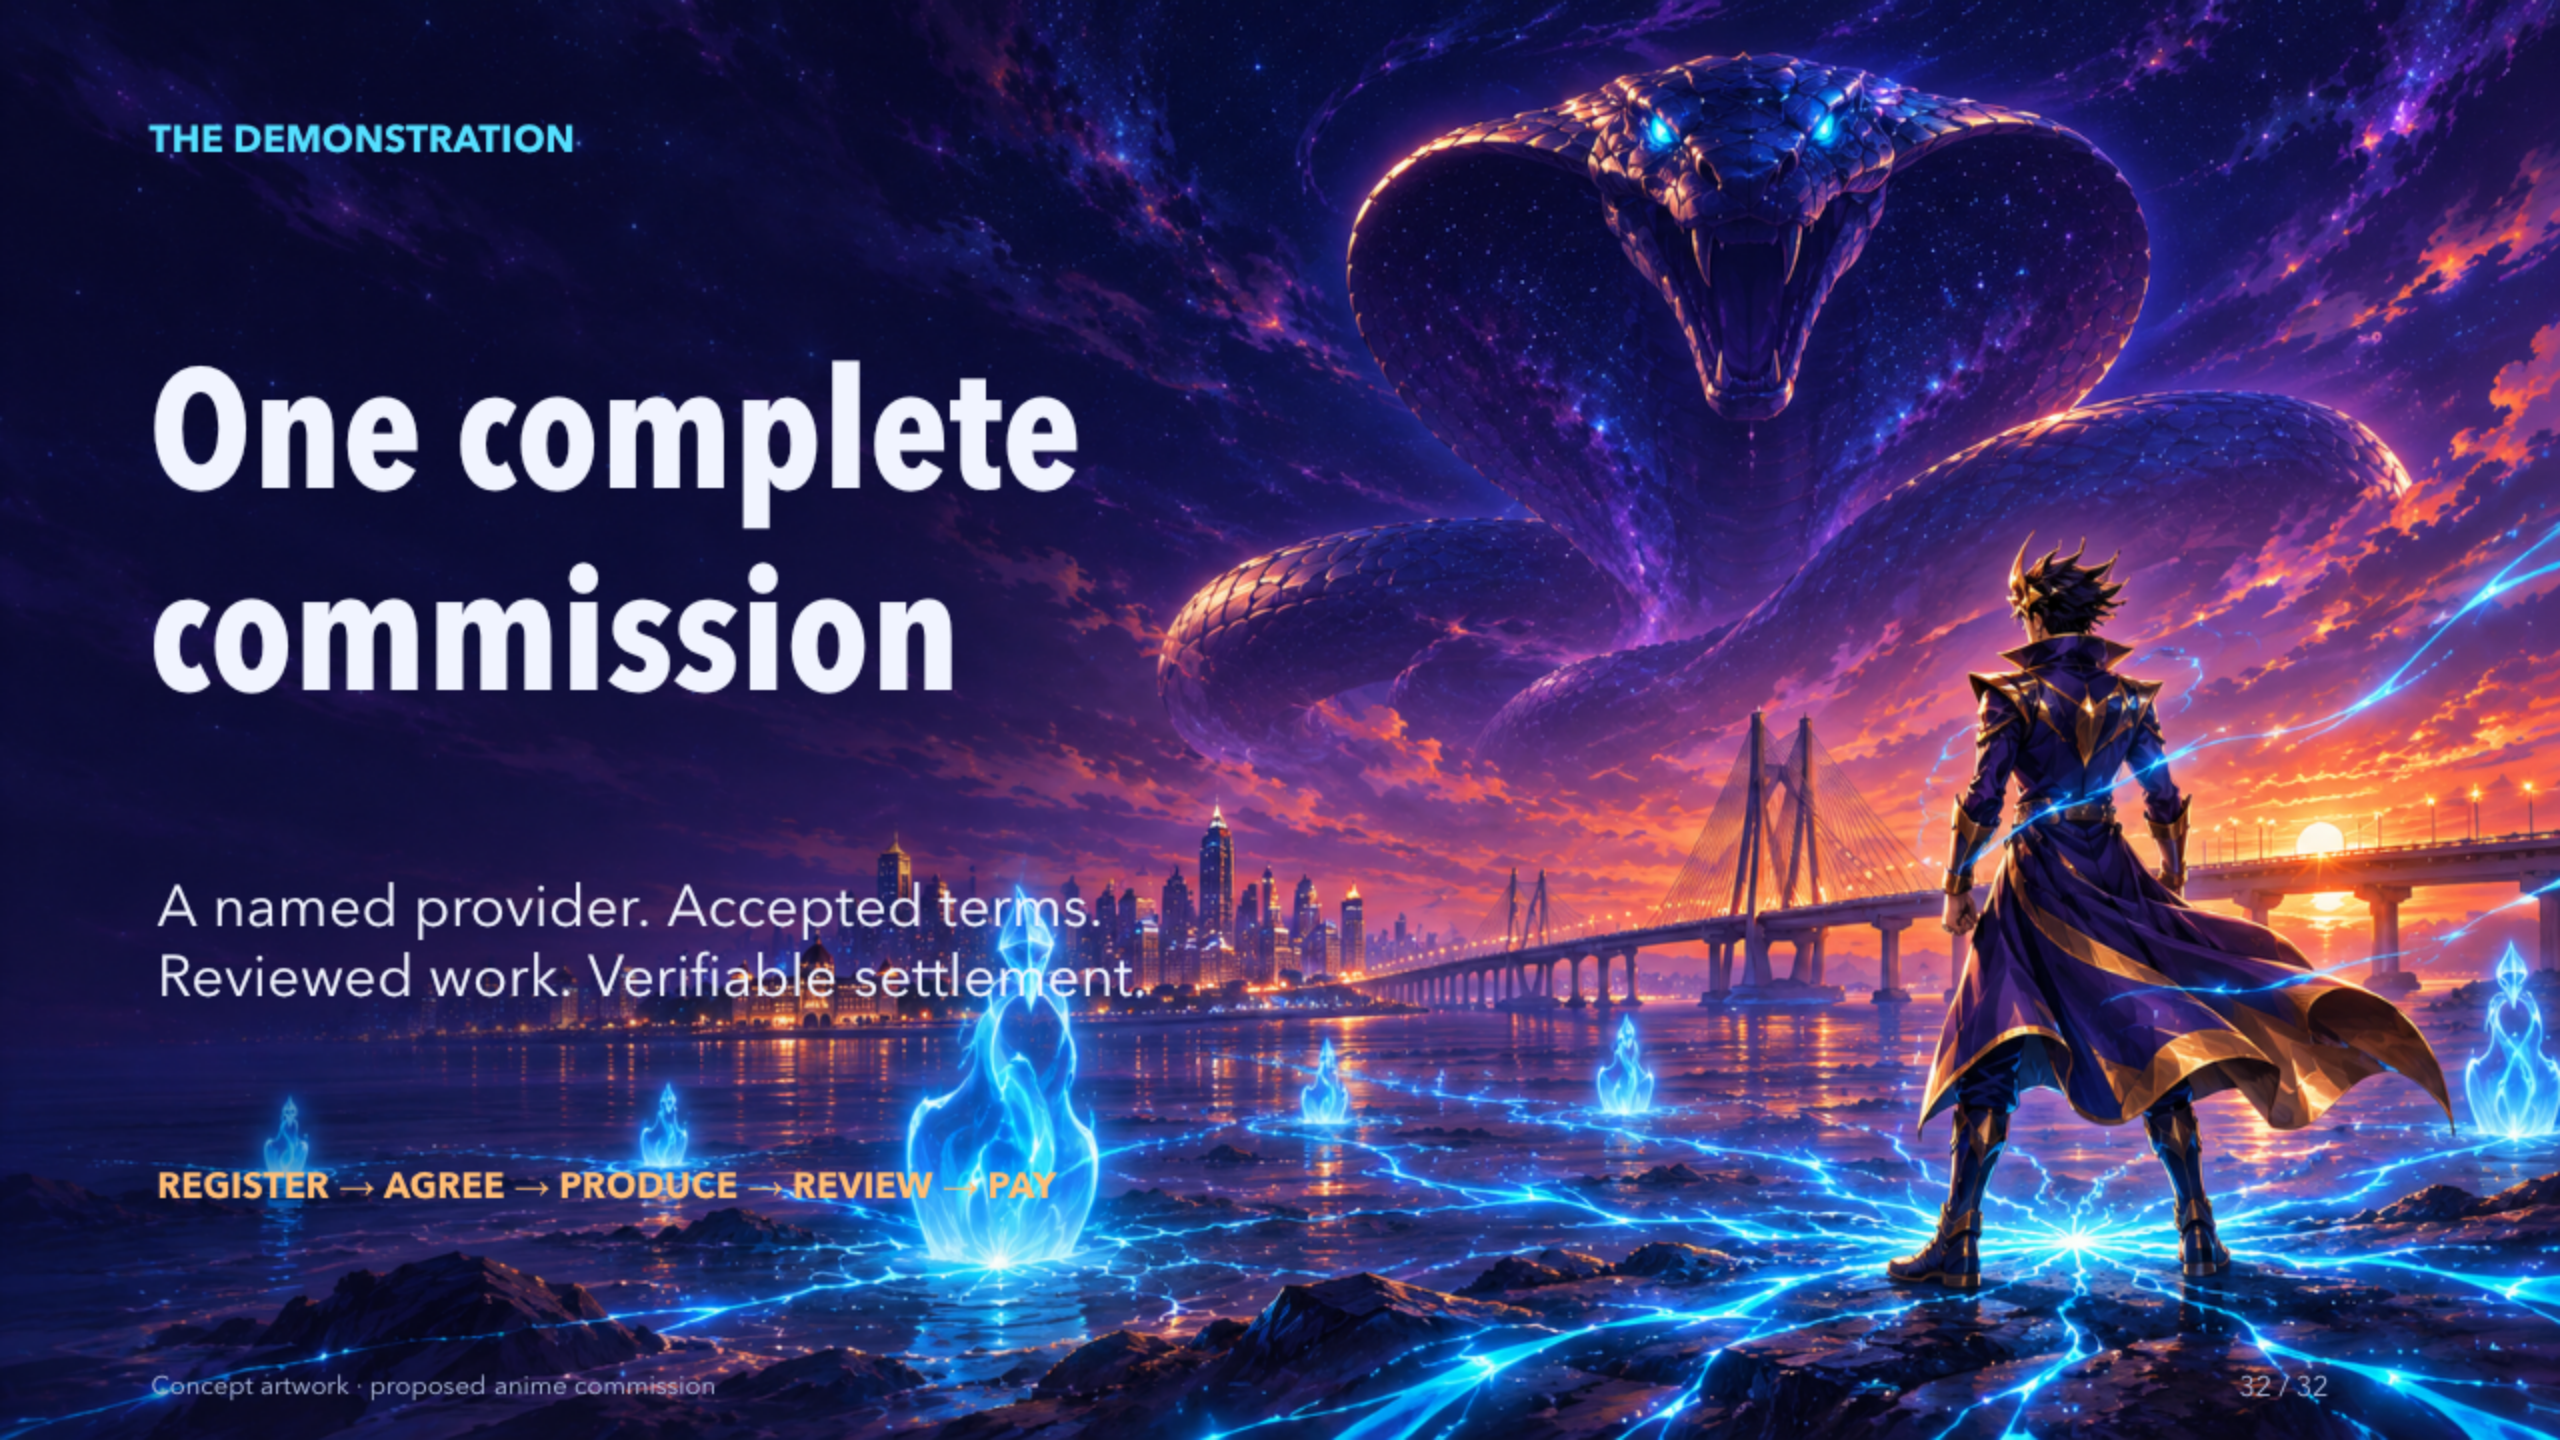

Area	Recorded status
Akira identity	Base registration recorded; name and service activation still unverified
Settlement/API	Adapter tests and draft PR recorded; live integration blocked
Public lifecycle	Missing authenticated settlement-to-paid reconciliation bridge
Anime workflow	Proposed service; cost, latency and complete pipeline unmeasured
Complete transaction	No verified live end-to-end success in the inspected handoff

THE DEMONSTRATION

One complete commission

A named provider. Accepted terms.
Reviewed work. Verifiable settlement.

REGISTER → AGREE → PRODUCE → REVIEW → PAY
